Tugas Kecil 1 IF2211 Strategi Algoritma

Penyelesaian Word Search Puzzle dengan Algoritma Brute Force

A. Algoritma *Brute Force*

Brute force adalah sebuah pendekatan yang lempang (*straightforward*) untuk menyelesaikan suatu masalah berdasarkan pernyataan masalah dan definisi konsep yang dilibatkan. Algoritma *brute force* memecahkan masalah dengan sangat sederhana, langsung, dan dengan cara yang jelas (*obvious way*).

Word search puzzle adalah permainan kata dimana pemain harus menemukan beberapa kata tersembunyi dalam kumpulan huruf acak. Kumpulan huruf tersebut biasa diletakkan pada "papan" berbentuk segi empat atau dapat disebut juga matriks huruf. *Word search puzzle* dapat diselesaikan dengan berbagai macam strategi algoritma, salah satunya yakni *brute force*.

Langkah-langkah yang dilakukan dalam menyelesaikan persoalan *word search puzzle* dengan memanfaatkan strategi algorima *brute force* adalah sebagai berikut.

1. Buat sebuah matriks yang masing-masing elemen mengandung satu buah karakter yang menyimpan puzzle dari file *input*. Kemudian, buat sebuah *queue* yang terdiri dari list seluruh kata dari file input yang akan dicari nantinya pada permainan *word search puzzle*.
2. Mulai pencarian karakter pertama dari kata pertama pada queue pertama dengan mencocokkannya dengan karakter pada setiap elemen matriks. Hal tersebut akan dilakukan dengan memulai pada posisi pojok kiri atas dari matriks dan akan diasumsikan posisi awal tersebut sebagai koordinat (0,0). Apabila pada posisi tertentu tidak ditemukan kecocokan, maka dilakukan pencocokan selanjutnya pada baris kolom berikutnya. Apabila telah berada pada kolom terakhir, maka pencocokan selanjutnya dimulai dari baris berikutnya dan kolom pertama. Hal ini akan dilakukan seterusnya hingga ditemukan kecocokan atau proses pencocokan telah berakhir pada pojok kanan bawah.

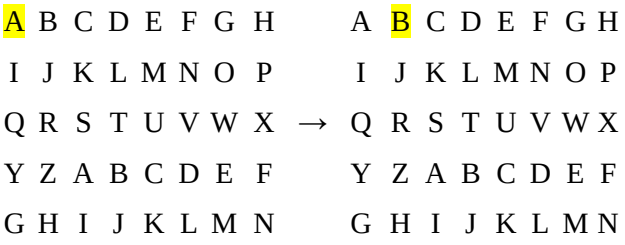
A	B	C	D	E	F	G	H
I	J	K	L	M	N	O	P
Q	R	S	T	U	V	W	X
Y	Z	A	B	C	D	E	F
G	H	I	J	K	L	M	N

Gambar 1. Pencarian kata dimulai dari koordinat (0,0)

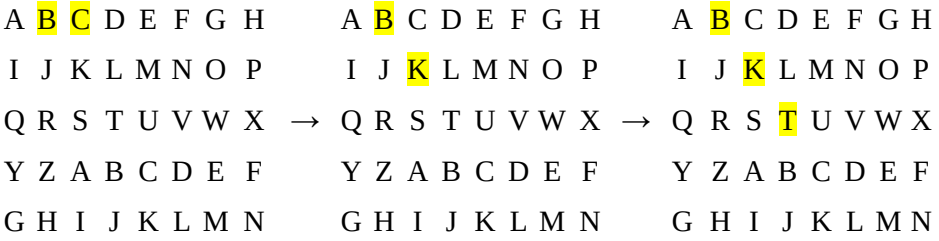
3. Jika kecocokan berhasil ditemukan, pencocokan akan lanjut ke arah yang telah ditentukan, yakni dengan melakukan pencocokan pada 8 arah yang mungkin, yaitu ke atas, serong kanan

atas, kanan, serong kanan bawah, bawah, serong kiri bawah, kiri, dan serong kiri atas.

4. Jika kecocokan berikutnya tidak berhasil ditemukan, ada dua kasus yang akan terjadi:
   a. Pertama, saat semua arah belum dicoba, maka pencarian akan berganti pada arah yang belum dicoba sebelumnya. Setelah itu, pencarian dilanjutkan.
   b. Kedua, saat semua arah telah dicoba, maka akan dilanjutkan ke elemen selanjutnya pada matriks puzzle sebagaimana yang telah dijelaskan pada poin kedua.



Gambar 2. Contoh pencarian kata “BKT” ketika karakter pertama pada kata tersebut tidak sama dengan karakter pada elemen tertentu sehingga pencarian dilanjutkan pada elemen berikutnya



Gambar 3. Contoh pencarian kata “BKT” yang mencoba semua arah kemudian menemukan arah yang tepat hingga membentuk kata “BKT”

5. Jika ditemukan kecocokan kata, artinya semua karakter sudah cocok dengan kata yang dicari dengan arah tertentu, maka akan dikeluarkan *output* berupa kata yang telah ditemukan sesuai dengan posisi pada masing-masing karakter dari kata tersebut yang terletak pada *puzzle*.

B. Source Program

Dalam menyelesaikan persoalan *word search puzzle* dengan memanfaatkan strategi algorima *brute force*, penulis membuat program dalam bahasa C dengan memanfaatkan beberapa ADT yang telah dipelajari pada mata kuliah IF2110.

1. charmachine.h dan charmachine.c

charmachine.h

```c
#ifndef CHAR_ENGINE_H
#define CHAR_ENGINE_H

#include "boolean.h"

#define MARK '.'
/* Char Engine State */
extern char currentChar;
extern boolean eot;

void startWithFile(FILE* f);
/* Mesin siap dioperasikan. Pita yag berasal dari sebuah file .txt disiapkan untuk dibaca.
   Karakter pertama yang ada pada pita posisinya adalah pada jendela.
   I.S. : sembarang
   F.S. : currentChar adalah karakter pertama pada pita
          Jika currentChar != MARK maka EOP akan padam (false)
          Jika currentChar = MARK maka EOP akan menyala (true) */

void adv();
/* Pita dimajukan satu karakter.
   I.S. : Karakter pada jendela = currentChar, currentChar != MARK
   F.S. : currentChar adalah karakter berikutnya dari currentChar yang lama,
          currentChar mungkin = MARK
          Jika  currentChar = MARK maka EOP akan menyala (true) */

#endif
```

charmachine.c

```c
#include "..\header\charmachine.h"

char currentChar;
boolean eot;

static FILE * tape;
static int retval;

void startWithFile(FILE* f) {
    tape = f;
    adv();
}

void adv() {
    retval = fscanf(tape,"%c",&currentChar);
    eot = (currentChar == MARK);
    if (eot) {
      fclose(tape);
    }
}
```

2. wordmachine.h dan wordmachine.c

wordmachine.h

```c
/* File: wordmachine.h */
/* Definisi Word Engine */

#ifndef WORD_ENGINE_H
#define WORD_ENGINE_H

#include "boolean.h"
#include "charmachine.h"

#define CAPACITY 50
#define BLANK ' '
#define CR '\r' //carriage return
#define LF '\n' //line feed

typedef struct {
   char contents[CAPACITY]; /* container penyimpan kata, indeks yang dipakai [0..CAPACITY-1] */
   int length;
} Word;

/* Word Engine State */
extern Word currentWord;

void ignoreBlank();
/* Mengabaikan satu atau beberapa BLANK
   I.S. : currentChar sembarang
   F.S. : currentChar ≠ BLANK */

void copyWordFromFile();
/* Mengakuisisi kata, menyimpan dalam currentWord
   I.S. : currentChar adalah karakter pertama dari kata
   F.S. : currentWord berisi kata yang sudah diakuisisi;
          currentChar = BLANK atau currentChar = MARK atau currentChar = '\n' atau currentChar = '\r'
          currentChar adalah karakter sesudah karakter terakhir yang diakuisisi.
          Jika ternyata currentChar tetap berupa karakter terakhir yang diakuisi, pembacaan file telah berakhir.
          Jika panjang kata melebihi CAPACITY, maka sisa kata terpotong */

#endif
```

wordmachine.c

```c
#include "..\header\wordmachine.h"

/* Word Engine State */
Word currentWord;

void ignoreBlank(){
    while ( (currentChar == BLANK ) ){
        adv();
    }
}

void copyWordFromFile(){
    int i = 0;
    boolean endOfWord;
    char tempCC,tempCC1,tempCC2,tempCC3,tempCC4,tempCC5;

    endOfWord = false;
    while ( (currentChar != LF) && (!endOfWord) ) {
        currentWord.contents[i] = currentChar;
        tempCC = currentChar; // S udah disimpen
        adv(); // S belom disimpen

        if (tempCC == currentChar) {
            tempCC1 = currentChar;
            adv();
            if (tempCC == currentChar){ // W
                tempCC2 = currentChar;
                adv();
                if (tempCC == currentChar){
                    tempCC3 = currentChar;
                    adv();
                    if (tempCC == currentChar){
                        tempCC4 = currentChar;
                        adv();
                        if (tempCC == currentChar){
                            tempCC5 = currentChar;
                            adv();
                            if ( tempCC == currentChar ){
                                endOfWord = true;
                            } else {
                                i = i + 5;
                                currentWord.contents[i-4] = tempCC1;
                                currentWord.contents[i-3] = tempCC2;
                                currentWord.contents[i-2] = tempCC3;
                                currentWord.contents[i-1] = tempCC4;
                                currentWord.contents[i] = tempCC5;
                            }
                        } else {
                            i = i + 4;
                            currentWord.contents[i-3] = tempCC1;
                            currentWord.contents[i-2] = tempCC2;
```

wordmachine.c

src > driver > C wordmachine.c > copyWordFromFile()

```c
            if (tempCC == currentChar){ // W
                tempCC2 = currentChar;
                adv();
                if (tempCC == currentChar){
                    tempCC3 = currentChar;
                    adv();
                    if (tempCC == currentChar){

REFINEMENT
SADSACK
SARONG
SATIRIZED
SCHEDULED
SEQUEL
```

large3.txt

test > large3.txt

```
SCHEDULED
SEQUEL
SESSION
SISTER
SLAVISHLY
SNOB
SPOOKY
SYNERGY
TANG
UNIFYING
UTAH
VIDEO
ZEALOT
```

Output:

Enter the file name without typing the extension (make sure the file is in the test folder and has a .txt extension)
Example : test1
>> large3
Here are all the words found in the puzzle.

The program execution time is 1.98 seconds
The number of comparisons of all letters made to find all the words in the puzzle is 39581 comparison

D. Alamat Kode Program

Program dapat diunduh dari alamat berikut:

https://drive.google.com/drive/folders/1R3NU-4R0aAFGzqbXvf5gf6UzQK409GI2?usp=sharing

Atau dapat melalui

https://github.com/shdiqq/Tucil1_13520038.git

E. Tabel Penilaian

Poin	Ya	Tidak
1. Program berhasil dikompilasi tanpa kesalahan (no syntax error).	☒	☐
2. Program berhasil *running.*	☒	☐
3. Program dapat membaca file masukan dan menuliskan luaran.	☒	☐
4. Program berhasil menemukan semua kata di dalam puzzle.	☒	☐
